Acora Acoustics

SRC-2

2.5-Way Loudspeaker

As you listen to the Acora Acoustics SRC-2 loudspeaker, you will hear immersive space and imaging. You will hear deep, authoritative yet articulate bass. You will hear fine detail and depth.

We believe you will hear many things you simply hadn't before.

What you won't hear is the enclosure. Acora Acoustics loudspeakers are constructed using hand crafted, specially treated granite enclosures. The rigidity of granite far exceeds that of traditional particle board or wood enclosures. One of the benefits of this is, as the SRC-2's drivers move to push air / create sound, the enclosure isn't absorbing this energy, dulling or smearing the sound. Another benefit of the Acora enclosure. it does not need internal bracing to "stiffen" the enclosure. No internal bracing means no additional reflections inside the enclosure that will vibrate the low frequency drivers and smear the sound.

The SRC-2 utilizes world class drivers and a hand built crossover network, however the real secret to the **Acora Sound**, is that you only hear these, not the enclosure.

Specifications

Design = 2.5 Way Bass Reflex

Low Frequency Drivers = 2 x 7" Sandwich Paper Cone

High Frequency Drivers = 1" Beryllium Dome Tweeter

Impedance = 4 ohm

Recommended Power = 10w - 250w

Sensitivity = 92.5 1w/1m

Frequency Range = 29Hz - 30KHz

Enclosure = High Polish Black Granite 3cm

Dimensions = 14" x 18" x 43"

Weight = 244lbs each

(All specifications subject to change without notice)
